Land Mobile Communications Council (LMCC) Requests Revisions to Rules Governing Centralized Trunking Systems

(Mclean, VA) In a [June 3 letter](#) filed with the FCC, the LMCC submitted Supplemental Comments in WP Docket No. 07-100, which recommended specific revisions to the rules governing the availability and licensing of centralized trunked systems in the Industrial/Business and Public Safety 150-512 MHz bands. The specific rule sections affected are 90.7 and 90.187.

In its letter, the LMCC pointed out that they have “worked to fine-tune its recommendations in response to evolving technical approaches with the objective of proposing rules that will serve both Industrial/Business and Public Safety applicants for new systems as well as incumbent licensees.” Further, the LMCC requested that the “FCC consider these proposed revisions as a means to promote spectrum efficiency through centralized trunking systems while simultaneously protecting incumbent wireless system investments.”

The LMCC is a nonprofit association of nineteen organizations that represent the wireless communications interests of public safety, critical infrastructure, business, industrial, transportation, private and common carriers, and manufacturers of wireless communications equipment.
